The instructions follow:

1. From the Element main menu select "Database Admin"

2. Select "Custom EDD Builder"

3. Click the **Build EDD** button

4. Click the **Import EDDs** button

5. Navigate/browse to the location of the unzipped .mdb file and click the **Open** button

6. Click the **Import EDDs** button

Regards,

~~~~~~

Thanks, Josef. Just learned how to import an EDD! I'm at ver. 6.12.2008, but imported just fine.

All,

At Region 8, our ESAT contractors use Scribe. Attached is the Element EDD that we use when we report data to Superfund/share data with ESAT. I exported the EDD from our system. After unzipping, the file can be imported directly in to Element. We are currently running Element version 6.15.2005 and EDD Builder version 1.2.0.51.

Hope this helps!

Josef

I'll reply to *R3 ESC-LTIG LIMS* when I find out the data format useful to the emergency response POCs; fingers crossed it's as below. Thank you all for your replies so far.

We all have the EPA Scribe EDD so hopefully that will be acceptable for them.

Scribe can import any of several different EDD formats. Hopefully there is someone in charge of data management for this project and he/she will be able to work with us to determine a format that we can all produce and that will meet the project needs.

No, it's a routine we created with some coldfusion scripts. It is pretty customized to the way we do things. Not really something that would be useful to share. But even if we used EDD Builder, since we store a lot information about samples and stations in custom fields what we have wouldn't apply to other regions.

Is the routine format an EDD you created with the builder?

Similar to what Robin said, during the gulf oil spill, I seem to remember them using our Region 4 "routine format" to import into Scribe. I don't recall any problems. I think Scribe was designed to be fairly flexible in that regard. As long as you keep the format consistent and it contains all the needed information, they can probably map Scribe to that format.

Our routine format for EDDs has worked for Scribe uploads. The way I understand it is that there are no Valid Values for the data that need to be matched, but, the Column header names must match…which our EDD format apparently does. I can send you a copy if that would help.

Dear LIMS users-

By now you may have seen or read about the accidental discharge along the Animas River in Colorado. Scribe is the requested data format for the inter-regional assistance project.

Can you get in touch with me if you have Promium LIMS and have used Scribe?

Thank you,

Greg
